Campus Library Pilot

Synthetic evaluation material. No real participants or institutions.

The four-week pilot enrolled 120 students at one fictional campus.

96 students completed the pilot. Completion rate: 80 percent.

The project tested a revised library study-space booking process.

Observed Results

Average weekly booking administration time before the pilot: 12 hours.

Average weekly booking administration time after the pilot: 9 hours.

The pilot budget spent was 2400 fictional credits.

These are descriptive observations, not proof of a causal effect.

Limitations and Next Steps

There was no randomized control group.

The pilot covered a single campus and lasted only four weeks.

Non-completers may have had different experiences.

Next step: test at additional campuses with a comparison group.

No claim about grade improvement or nationwide savings is supported.
